## Summary

Full Stack Developer with 1+ year of professional experience building scalable web applications and RESTful APIs using React.js, and Node.js and Spring Boot. Delivered Generative AI integrations (Google Gemini, OpenAI) that increased user engagement by 25% and automated key workflows. IEEE published researcher with hands-on experience in Agile environments, delivering features with a 95% on-time rate. Actively seeking roles at the intersection of software engineering and AI product development.

## SKILLS

|                                                     |                                                                                                 |
|-----------------------------------------------------|-------------------------------------------------------------------------------------------------|
| <b>Languages</b><br>Java, JavaScript, C++, SQL, PHP | <b>Frameworks</b><br>React.js, Node.js, Laravel, Spring Boot                                    |
| <b>Databases</b><br>MySQL, MongoDB                  | <b>Tools &amp; Technologies</b><br>Docker, AWS (Basics), Git, GitHub, Postman, IntelliJ, Cursor |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                         |

| <b>Programmer, Takyon System Solutions Pvt.Ltd.</b><br>• Architected and maintained scalable PHP (Laravel) web application serving 100+ schools and 1000+ active users.<br>• Designed and implemented RESTful APIs, improving system integration efficiency by 30%.<br>• Identified and resolved critical bugs and performance bottlenecks, improved system reliability by 35%.<br>• Integrated Generative AI features including AI-powered tutorials, automated text generation, and summarization, enhancing user engagement by 25%.<br>• Utilized GitHub Copilot, Cursor, and OpenAI APIs to accelerate development, reducing implementation time by 25% and improving code quality and AI-driven functionality.<br>• Collaborated with cross-functional teams, maintaining a 95% on-time feature delivery rate. | Jul 2024 – Aug 2025<br>Thrissur, Kerala |
| <b>Intern, Reverttech IT Solutions</b><br>• Successfully completed a two month comprehensive training and internship program focused on Python development and MongoDB.<br>• Built backend logic using Python and worked with MongoDB for database design and CRUD operations, handling 10+ data models and ensuring efficient data processing during development.<br>• Collaborated with a team of 3-4 members to build and test application features, contributing to timely delivery of assigned tasks during the internship period.                                                                                                                                                                                                                                                                             | Jan 2023 – Mar 2023<br>Kochi, Kerala    |

## EDUCATION

|                                                                                                                                                                                                                  |                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>Post Graduate Diploma in Advanced Computing, Centre for Development of Advanced Computing (C-DAC)</b><br>Completed with 77.68% (Grade A)   Specialization in Full Stack Development and Software Engineering. | Aug 2025 – Feb 2026<br>Bengaluru, Karnataka |
| <b>B.Tech in Computer Science and Engineering,</b><br>APJ Abdul Kalam Technological University Sahrdaya college of engineering and technology<br>CGPA:6.99/10                                                    | Dec 2020 – Jun 2024<br>Thrissur, Kerala     |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Collaborative Code Editor, React.js, Node.js, Express.js, Socket.io, Yjs, Docker, AWS</b><br>• Created a real-time collaborative code editor supporting 10+ concurrent users, enabling instant code synchronization through Yjs CRDTs and WebSocket-based communication.<br>• Built a scalable backend using Node.js, Express.js, Socket.io, and Yjs, managing real-time code synchronization across multiple concurrent user sessions.<br>• Integrated Monaco Editor for collaborative coding with live updates, syntax highlighting, and seamless multi-user editing capabilities.<br>• Containerized and deployed the application using Docker on AWS, reducing deployment setup time by 70% and ensuring consistent environments across development and production. | Apr 2026 – May 2026 |
| <b>Signalist, Next.js, React.js, MongoDB, Google Gemini</b><br>• Deployed a Real-Time Stock Market Application using Next.js 15, React, and MongoDB.<br>• Established a production-ready sign-in interface utilizing Next.js and React, ensuring secure authentication flows for a comprehensive suite of 30+ diverse test user profiles.<br>• Integrated Finnhub API and configured a stock search feature enabling users to search and add 15+ stocks, improving data retrieval efficiency and user interaction.<br>• Integrated debouncing in search functionality to cut unnecessary API requests by nearly 40%, ensuring compliance with API rate limits.                                                                                                             | Dec 2025 – Jan 2026 |
| <b>MockMate, React.js, Node.js, Express, MongoDB, Google Gemini</b><br>• Created a full-stack web application enabling users to practice technical interviews with Generative AI-based content generation and feedback, supporting 15+ simulated interview sessions.<br>• Built a scalable backend using Node.js and Express with MongoDB for secure user authentication, managing 20+ user sessions and structured data storage.<br>• Designed and consumed RESTful APIs with JWT-based authentication, securing 5+ endpoints and enabling safe and efficient user authentication.<br>• Integrated Google Gemini API to enable AI-driven interview content generation and intelligent feedback mechanisms, improving response relevance and personalization by 30%.       | Oct 2025 – Dec 2025 |
